“Aspherical Optical System” (AOS) exclusively from HEINE eliminates corneal and iris reflexes to provide large, crisp and glare-free fundus images.

- [01] Flat, elliptical illumination beam produced by HEINE’s aspherical optical System.
- [02] Observation path.
- [03] Redirected iris and corneal reflexes.
- [04] The elliptical light beam enters through the lower half of the cornea. The illumination beam has been separated from the observation beam (Gullstrand-Principle). All reflexes are diverted away from the observation beam due to the curvature of the reflective cornea. Due to the flat, compressed form of the light beam, a maximum amount of light enters through the pupil.
- [05] Once past the anterior chamber, the light beam opens up dramatically to illuminate a large area of the retina.

HEINE mini 3000® ophthalmoscope

Compact pocket ophthalmoscope with XHL or LED^{HQ} illumination

LED IN HEINE QUALITY.

mini 3000 apertures

Fixation star, large spot, small spot,
hemispot, red-free filter

Modern pocket ophthalmoscope with concentrated bright light for perfect illumination, a brilliant image and accurate colour rendering. Fixation star aperture with grey filter for reducing the light intensity. Excellent optics and best colour rendering in minimum dimensions, ideal for rounds and house calls. Can be used with the mini 3000 handle system. Available in black and blue.

Features for both instruments (XHL and LED):

- ∴ HEINE optics produce crisp, clear images of the whole area under examination and minimise reflections.
- ∴ **5 different apertures.** A full-function instrument incl. fixation star.
- ∴ Grey filter for light-sensitive patients.
- ∴ **Range of lenses: 18 lenses from -20 D to +20 D.**

+	1	2	3	4	6	8	10	15	20D
-	1	2	3	4	6	8	10	15	20D
- ∴ **Easy workflow,** because ophthalmoscopy is possible without dilation of the pupils.
- ∴ **Attachment clip with integrated on/off switch.** Switches off automatically when returned to the pocket.
- ∴ **Replaceable batteries.** Size AA, or optional rechargeable battery with mini NT table charger.*
- ∴ **2-piece handle and head.** Easy to maintain, flexible.
- ∴ **Award-winning design.** Maximum quality with minimum dimensions.

Special features of the LED instruments:

- ∴ **Maintenance-free,** no need to ever replace the LED.
- ∴ LED Thermal management for a **consistent light output throughout the whole working life.**
- ∴ **There's LED. And there's LED^{HQ}.** HEINE has set a new standard which maintains that only the best is good enough, from the selection of materials to processing, from light intensity and thermal management to a colour rendering index as high as possible. **That's what we call LED in HEINE Quality – or LED^{HQ}.**
- ∴ **Exclusive battery performance Indicator:** When the instrument is switched on, the maximum light intensity is shown, then the light intensity is regulated down to the level that corresponds to the current charge status of the battery so you know when your batteries need changing.
- ∴ **Fade-out feature:** brightness reduces slowly even with low residual capacity, for even more efficient use of dry or rechargeable batteries.
- ∴ **Operation time typ. 10 hours.** The batteries need to be changed less often and the rechargeable batteries last longer.

*To upgrade to a rechargeable instrument with mini NT table charger, please see page 132.

Hand-held retinoscopes for objective refraction.

The BETA 200 retinoscope is used for the exact measurement of the refractive error. Both myopia and hyperopia as well as astigmatism can be measured.

Two versions are available:

The spot retinoscope with a round light spot (available only as XHL variant) and the more widely-used streak retinoscope with a streak image which simplifies the examination.

***HEINE ParaStop**

The BETA 200 retinoscope with ParaStop features the latest multi-coated optics for an exceptionally bright fundus reflex and easier detection of the neutralisation point. ParaStop was developed by HEINE for the easy, precise selection of a parallel illumination beam. ParaStop simplifies and speeds up the precise detection of cylinder axis. ParaStop also simplifies the verification of the cylinder correction after refraction.

HEINE BETA® 200 LED retinoscope with HEINE ParaStop®

With LED illumination in HEINE Quality – LED^{HQ}

Homogenous LED illumination for precise streak image quality offers an easy and quick observation of the fundus reflex.

- ∴ ParaStop. Precise, easy selection of a parallel beam* (see above).
- ∴ **Brilliant, precise streak image** with a line width of typically 1.1 mm (ISO 12865 Standard < 1.5 mm) and a line length of 35 mm for a very bright, readily visible fundus reflex.
- ∴ **There's LED. And there's LED^{HQ}.** HEINE has set a new standard which maintains that only the best is good enough, from the selection of materials to processing, from light intensity to dimmability, and from thermal management to a colour rendering index as high as possible. **That's what we call LED in HEINE Quality – or LED^{HQ}.**
- ∴ **Patented, unique, stepless dimming** from 3% to 100% with practical one-finger operation.
- ∴ **Ergonomic shape.** Protects the examiner's orbita from stray light.
- ∴ **Metal controls.** Long-lasting.
- ∴ **Single control for vergence and rotation.** Comfortable operation.
- ∴ **Maintenance-free.** Dustproof. LED with virtually unlimited hours of working life.
- ∴ **Integrated polarisation filter.** Eliminates stray light and internal reflexes for a brighter fundus reflex.
- ∴ **Detachable brow rest.** Increased comfort and control during examination.
- ∴ **Holder for fixation cards (optional).** For dynamic retinoscopy.
- ∴ **Full functionality of the BETA 200 LED is guaranteed with BETA rechargeable handles and the EN 200 / EN 200-1 wall transformers.**

HEINE LAMBDA 100 retinometer

For assessing potential visual acuity

The LAMBDA 100 retinometer is the first compact instrument for assessing potential visual acuity of patients with cataracts and other opacities. LAMBDA 100 – clinically tested with excellent results.*

- ✦ **Simple, easy-to-use controls.** Reliable diagnosis, easy to operate.
- ✦ **Compact, lightweight (100g).** Can be used anywhere – even bedside.
- ✦ **XHL xenon halogen technology and brightness control.** Avoids patients discomfort from dazzle.

Three simple steps for assessing potential visual acuity with LAMBDA 100

1. Switch on instrument, select acuity, adjust pattern of lines, reduce ambient lighting.
2. Rest retinometer against the patient's forehead. Scan the pupil with the red light spot to find a "window" through which the patient can recognise the pattern of lines.
3. Select progressively finer lines with different angles until the patient can no longer recognise the angle. The value of the last recognisable angle indicates potential acuity.

0°
Visus = 0,5 $\left(\frac{20}{40}\right)$

45°
Visus = 0,32 $\left(\frac{20}{60}\right)$

90°

LAMBDA 100 Examples of various acuity grating patterns (visual angle 1°)

* Validated by the study "Accuracy of the HEINE LAMBDA 100 Retinometer" in Investigative Ophthalmology & Visual Science, May 2008, Vol. 49, Southern College of Optometry, Memphis, Tennessee and the study "Reliability of predictable postoperative visual acuity of cataracts as measured by HEINE LAMBDA 100 retinometer preoperatively" by the Departamento de Oftalmologia, May – June 2010, São Paulo, Brasil.

HEINE EasyClean® LED laryngoscope handle

All three handle sizes: STANDARD, SLIM AND SHORT

The HEINE EasyClean LED laryngoscope handle was developed to allow even simpler, faster and safer hygienic reprocessing of the handle – no complex disassembling and assembling of batteries and light unit. This saves the technical service personnel a great deal of time, and reduces the training and maintenance effort.

SIMPLE, FAST AND SAFE CLEANING

- **Non-slip “wave design”** improves the reliability of the wipe disinfectant for the handle after use (‘intermediate disinfection’).
- **100% waterproof.** In the case of immersion disinfection (‘high-level disinfection’) or low temperature sterilisation processes (STERRAD®, VHP® (Steris)), neither the batteries nor the LED light unit need to be removed.
- **Autoclavable LED technology:** No removal of the light unit required for use in autoclaves, just batteries.

PERFECT VIEW

- **There’s LED. And there’s LED^{HQ}.** HEINE has set a new standard which maintains that only the best is good enough, from the selection of materials to processing, from light intensity and thermal management to a colour rendering index as high as possible. **That’s what we call LED in HEINE Quality – or LED^{HQ}.**
- **Maximum brightness:** 3x brighter than conventional halogen light.
- Virtually **unlimited hours of working life.**

FAIL-SAFE

- **Typ. 10 hours of operating time** (EasyClean LED laryngoscope handle in continuous operation).
- **Fade-out feature:** brightness reduces slowly as battery operating time diminishes, for even more efficient battery use.
- **Compatible with all laryngoscope blades** according to ISO 7376 (green standard).

SHOCKPROOF

SHOCKPROOF

[01] Shockproof double-walled construction with unique manometer protection.

The robust double-walled construction with a unique triple manometer mount gives ideal protection against shocks. Meets the requirements of european standard EN ISO 81060-1 and ANSI/AAMI/ISO 81060-1.

AIR PRESSURE DISTRIBUTION SYSTEM

[02] Single-tube construction with an innovative air pressure distribution

system. The valve construction provides ideal air pressure conditions to absorb pressure peaks in the air flow to the manometer during inflation. This advantage was only possible until now with twin-tube systems.

Various magnifications (from 2.3x to 6x), working distances, wearing options (unique S-FRAME, Lightweight headband and Professional L headband) and LoupeLight2 illumination systems are available. HEINE binocular loupes are used in many disciplines: e.g. general medicine, dermatology, surgery, cosmetic surgery, neurosurgery, ENT, ophthalmology, veterinary medicine, dentistry etc.

Definitions:

∴ Working distance (x)

The distance, at which the optics of a loupe are sharply-focused.

∴ Depth of field (y)

The range over which the image remains sharply-focused.

∴ Field of view (z)

The area that can be seen under magnification at the nominal working distance.

More information can be found on www.heine.com

How to choose the correct loupe:

∴ Choose your magnification

Choose the lowest magnification that meets your needs. The lower the magnification, the larger the field of view and the easier the loupe will be to use.

∴ Choose your optics

HR: High resolution achromatic optics with excellent optical qualities.

HRP: High resolution prismatic optics with excellent optical qualities for 3.5x magnification and higher.

C: Economy.

∴ Choose your working distance

This is an individual choice depending on the examiner's size and working position. The longer the working distance, the bigger the field of view.

∴ Choose your mounting option

Spectacle frame or headband.

∴ Add illumination

Coaxial bright light is especially-important when using magnification.

HEINE EN 200 diagnostic centre

Modern, energy efficient wall system

[01]

- ∴ **Excellent energy efficiency.** Lower power consumption saves costs and is environmentally-friendly.
 - ∴ **Simultaneous use of handles.** The handles can be operated optimally with LED and/or XHL instruments. Due to the galvanic separation, two doctors can use the devices for examination purposes independently of each other.
 - ∴ **Multiple diagnostic possibilities.** Compatible with all HEINE instruments (LED or XHL) with AV connector.
 - ∴ **Maximum safety for user and patient.** The integrated galvanic separation protects the handles from unwanted electrical interaction.
 - ∴ **Optimal reprocessing.** Flat, space-saving housing without any openings allows optimal hygienic reprocessing. The absence of a mechanical switch reduces the risk of cross-contamination.
 - ∴ **Ready-to-use function.** Due to cutting-edge technology in the HEINE EN 200 the handle switches on and off automatically when taken off or returned to the unit. Set your brightness level once and it stays there every time you use your instrument. When not in use or when not returned to the unit, the illumination switches off after 15 minutes.
 - ∴ **Connectivity ready.** The device offers an USB port and can be expanded with HEINE modules such as the EN 200-1.
 - ∴ **Soft start technology** protects bulbs in the critical switch-on phase (prevents current surge) and prolongs bulb life.
 - ∴ **Continuous brightness control** between 100% and 3% for both XHL and LED illumination.
 - ∴ **Integrated anti-theft system** by means of a locking screw prevents unauthorised instrument head removal.
- ∴ **The EN 200-1.** As an add-on or if only a single instrument is needed. [01]

Each HEINE bulb is specifically designed as an integral part of the HEINE instrument it powers, based upon the following parameters:

Colour temperature:

Based on advanced HEINE XHL xenon halogen technology, each bulb is designed to provide the ideal colour temperature for the diagnosis the instrument is intended for. This ensures a proper balance between illumination brightness and true tissue colour for the most accurate diagnosis.

Bulb life:

HEINE bulbs last up to 50 % longer compared with conventional bulbs, providing long life, optimum performance and cost-effectiveness.

Safety:

Advanced design and manufacturing procedures prevent dangerous bulb implosions.

Optical performance:

The performance of each HEINE optical instrument depends on the bulb that powers it. Lenses built into the glass bulb envelope, precision filament placement and homogeneous light projection are major factors in ensuring the satisfactory performance of your HEINE instrument. We can only guarantee the performance and safety of your instrument if the appropriate HEINE bulb powers it. If a non-original copy of a HEINE bulb is used, the safety and performance of the HEINE instrument will be compromised and the manufacturer's guarantee will no longer be valid.

All XHL xenon halogen bulbs are now available singly in individual blister packs.

Insist on genuine HEINE replacement bulbs and parts to ensure the correct performance of your HEINE precision instrument.
